<u>DIARY NOTES</u>

25X1A

<u>DD/S</u> ███████   23 February 1961

25X1A9A   1. Shef Edwards, ████████████████████████briefed General Cabell, Kirk
and me on some sixty cases of security interest to the Director's Office. This is the
first of the semiannual briefings arranged between General Cabell, Mr. Kirkpatrick
and me. There are a number of cases that need to be followed up and Colonel Edwards
has the necessary instructions on them. It was obvious that this is a much more effi-
cient way to conduct this business than the submission of a written report to be circu-
lated around to the several offices.

     2. Larry Houston advised me that we as well as the General Services Adminis-
tration believe that we need concurrent jurisdiction with the State of Virginia at our
new building in order to allow our Security people and the GSA guards to discharge
their duties properly. The General Services Administration has agreed to write us a
letter, based upon which we can go to the Governor or other appropriate officials and
request the necessary concurrent jurisdiction.

25X1A9A   4. Emmett Echols telephoned to say that ████████ had planned to go to certain
Latin American countries to conduct a classification survey but that this would con-
flict with the examination of certain jobs which came up at the last Supergrade Review
Board Meeting. I told him that there was no question as to priority here and that un-
less there were overriding reasons to the contrary which I did not know about Bob
should postpone his trip to Latin America.

     5. I talked to Bob Macy about Frank Ecker's interest in having a meeting about
25X1C   the ███████████████. Bob was under the impression that the Director had needled
Elmer Staats because the Bureau had failed to follow up on his suggestion. I told him
that based upon my personal conversation with the Director I was sure that this was
not the case and that no meeting was necessary as far as we were concerned. He
agreed that we would drop the whole matter. (The Director's only interest was to see
whether it was possible ████████████████████████████   25X1A
